Apa itu e-SIM E-SIM ?

merupakan **SIM digital** yang membuat setiap pengguna ponsel dapat mengaktifkan paket seluler dari operator tanpa kartu SIM fisik. Dilansir dari situs resmi Kominfo, e-SIM tertanam di dalam perangkat yang akan teraktivasi secara jarak jauh dengan operator lokal untuk digunakan di suatu wilayah.

[Hanya beberapa operator seluler yang menyediakan layanan eSIM di Indonesia](#)

[Telkomsel](#)

[Indosat Ooredoo Hutchison \(IOH\)](#)

[Smartfren](#)

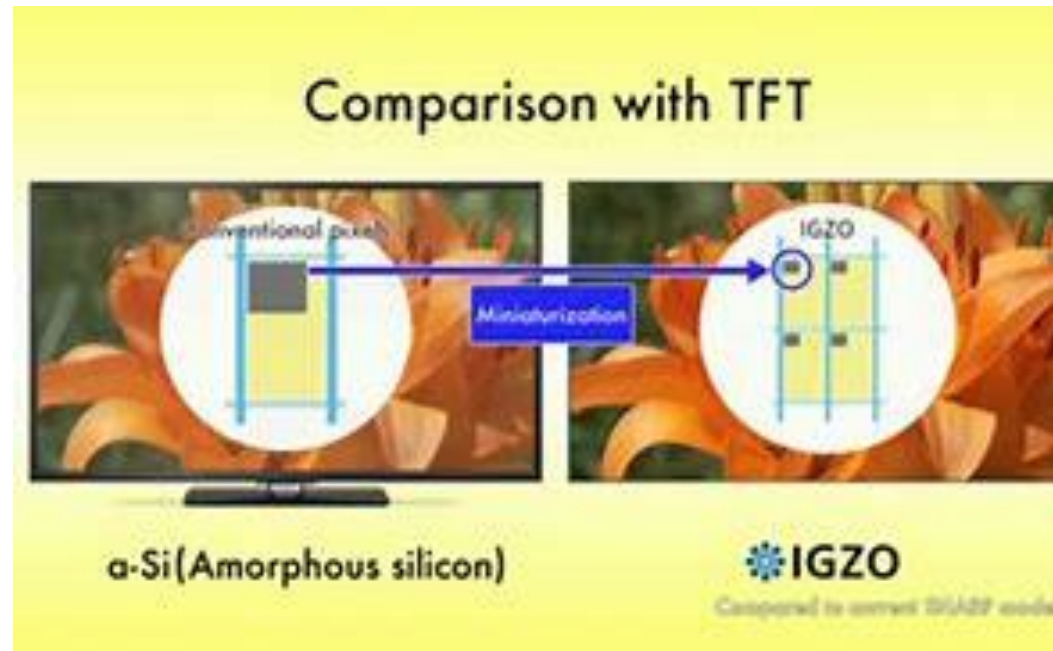

[XL Axiata](#)

IGZO

IGZO adalah akronim dari **Indium Gallium Zinc Oxide**, dan sebenarnya bukanlah jenis semikonduktor yang ditemukan TFT, karena memang IGZO bukanlah jenis panel melainkan jenis transistor yang ada di TFT.

Sehingga teknologi ini bisa dipakai di berbagai jenis panel, dari TN, VA, IPS, sampai yang terbaru yaitu OLED.
